Trading on ASX

ASX Trade

In November 2010, ASX launched its next generation trading system, ASX Trade, providing the fastest integrated equities and derivatives trading platform in the world. ASX Trade is powered by NASDAQ OMX's Genium INET platform. Latency is now 100 times faster than it was two years ago, having been improved from 30 milliseconds in 2008 to 300 microseconds today. The improved latency has been coupled with increased capacity, rising from 20,000 orders per second to 100,000 orders per second now.

ASX Best

ASX Best is a new generation trading application for a multi-market environment supporting smart order routing and additional functionality. ASX Best is co-located in ASX's data centre – the ASX Australian Liquidity Centre (ALC) – thereby providing low latency access to ASX TradeMatch and PureMatch. ASX Best is venue-neutral, offering low latency network connection to Chi-X and any other subsequent lit venue to support best execution. ASX Best is powered by Fidessa.

ASX Net

ASX Net is a fully managed, low latency and high capacity network solution that provides domestic connectivity to all ASX products including trading, clearing, settlement and market data. ASX Net is an Ethernet network provided over point-to-point fibre, delivers Sydney CBD distributed network access latency of approximately 200 microseconds.

ASX Australian Liquidity Centre (ALC)

The ALC is a purpose built, state-of-the-art data centre that hosts all ASX Liquidity. The ALC provides the fastest possible access to market data and trade execution for all ASX markets. The ALC is open to any customer needing data centre services and is vendor neutral. Participants, Clients, Service and System providers will have access to the facilities enabling more seamless connectivity between users.

Execution Costs Across Major Regional Exchanges

MARKET	MARKET IMPACT (BPS)	COST OF DELAY (BPS)	IMPLEMENTATION SHORTFALL (BPS)	AVERAGE AGENCY COMMISSION (BPS)
Australia	31	-4	28	11
Hong Kong	37	-9	28	4
Japan	25	-3	22	11
Singapore	30	1	31	11
South Korea	51	2	53	10
Taiwan	44	-21	24	15

Source: The Trade Q3 2012

ASX compares favourably with other regional exchanges in terms of implicit execution costs, with the lowest overall market impact and implementation shortfall measures in Asia-Pacific.

ASX Market Micro-structure

ASX operates multiple order-driven markets for equity securities. Orders in TradeMatch are matched continuously in price time priority with single price auctions facilitating the opening and closing sessions. TradeMatch also offers crossing, trade registration and large order execution facilities. PureMatch is a new order book offering continuous trading in a subset of ASX listed securities.

Trading Hours

GMT + 10:00 (Eastern Standard Time)

The market goes through a number of phases on any trading day. The particular market phase determines the type of action that may be taken for an order on ASX Trade, which in turn affects how trading is conducted.

Time	TradeMatch	PureMatch
7:00am	Pre_Open	Close
10:00am	Open	Open
10:30am		
3:35pm		
4:00pm	Pre_CSPA	
4:10pm	CSPA	
4:12pm	Adjust	Adjust

Opening and Closing Auctions

The opening and closing price for a security is determined by a four step approach involving the use of conditional decision rules. The same auction is used for opening and closing trading, IPOs and resuming trading after halts or suspensions. The four steps work as follows:

- Using all orders in the order book, the system determines the cumulative buy and sell quantities for each side of the book and then calculate the maximum executable volume (MEV) at each price level
- The system establishes the minimum surplus i.e. the price level where unfilled volume is at a minimum
- The system determines whether the majority of market pressure is on the buying or the selling side
- The system determines the latest reference price, usually the last price in trading for the previous day and if needed a comparison between the reference price and the auction price.

Morning Auction

The morning auction is split into groups to allow traders time to effectively manage their orders during the opening of trade. The opening rotation is split into five groups as follows:

- Group 1 10:00:00 am +/- 15 secs A-B e.g. ANZ, BHP
- Group 2 10:02:15 am +/- 15 secs C-F e.g. CPU, DJS
- Group 3 10:04:30 am +/- 15 secs G-M e.g. GPT, IPL
- Group 4 10:06:45 am +/- 15 secs N-R e.g. GAN, RIO
- Group 5 10:09:00 am +/- 15 secs S-Z e.g. TLS, WOW

Price Step (Tick Size)

The highly granulated ASX tick sizes offer reduced market impact for dealing by encouraging small market spreads.

PRICE RANGE	PRICE STEP	NUMBER OF EQUITY SECURITIES	NUMBER OF EQUITY SECURITIES (%)
0.1 cents – 9.9 cents	\$0.001	832	43.9%
10 cents – 199.5 cents	\$0.005	807	42.6%
\$2.00 – \$99,999,990	\$0.010	255	13.5%

Main Order Types Offered by ASX

- **Limit (LMT)** – A Limit Order is entered as a defined price, the order will not execute at a worse price.
- **Market-To-Limit (MTL)** – A Market-to-Limit order is a market order that converts to a limit price equal to the current best opposing price.
- **Best-Limit (BST)** – A Best Order is priority queued as a limit order at the current best bid or ask on the same side of the market.
- **Short Sell (SHL)** – Covered Short Selling is permitted under the Corporations Act. There are also special arrangements for Market Makers under certain circumstances.

In conjunction with the order types there are also several validity attributes:

- FoK: Fill or Kill, the order is cancelled if all the quantity cannot be executed immediately
- FaK: Fill and Kill, fill the order now as far as possible then cancel the rest
- Day: Expire at the end of the day
- Exp: Expire at the instrument's expiration date
- Date: Expire after a certain amount of calendar days
- GTC: Good till Cancelled, expire at the maximum allowed time for that particular instrument type

ASX Centre Point

- **Centre Point®** – an anonymous order that enables execution at the midpoint of the best bid and offer in ASX TradeMatch.
- **Centre Point Block** – block midpoint matching service supporting minimum fill protection
- **Limit Sweep and Market to Limit Sweep** – low latency routing between ASX Centre Point and TradeMatch

Advanced Order Types

- **Undisclosed Order** – an order type that is fully disclosed in terms of execution price but undisclosed regarding execution volume.
- **Iceberg Order** – a simple order reloading algorithm in TradeMatch, aimed at enhancing order management and controlling order signalling.
- **Equity Combinations** – reduce execution risk by entering multi-leg strategies at a specified net price.

Crossings

Priority Crossings

ASX allows Priority Crossings where a Trading Participant acts as buyer and seller in one transaction. The Trading Participant can use the ASX System to achieve time priority at the crossing price if the trade is executed according to ASX Operating Rules.

Centre Point Crossing

Enables an ASX Participant to cross at the midpoint of the best bid and offer in the ASX TradeMatch.

Off-Market Specials

A Block Special Crossing (BSC) is a crossing transaction that meets certain value conditions and therefore can be conducted off-market and reported back to the market as an off-market trade (requirements are set out in the relevant ASX Operating Rules Procedures. Block Special Crossings can currently be reported at any negotiated price.

Facilitation

Off-Market Specials that meet a further minimum value requirement can have their reporting to the market delayed. One side of these trades must be facilitated as principal by a broker. The minimum consideration for this transaction is between \$2 and \$15 million depending on the category of security.

NBBO Crossings

Crossings at or within the national best bid and offer.

Portfolio Crossings

Portfolio Special Crossings are a type of Block Special Crossing and allow a basket of securities to be traded together off-market if they meet certain minimum value and number of securities requirements. Portfolio Special Crossings enable you to trade an entire portfolio and can potentially have their reporting to the market delayed.

About ASX

ASX is a multi-asset class, vertically integrated exchange group, and one of the world's top-10 listed exchange groups measured by market capitalisation.

ASX's activities span primary and secondary market services, central counterparty risk transfer, and securities settlement for both the equities and fixed income markets. It functions as a market operator, clearing house and payments system facilitator. It monitors and enforces compliance with its operating rules, promotes standards of corporate governance among Australia's listed companies and helps to educate retail investors.

ASX's diverse domestic and international customer base includes issuers of securities and financial products, investment and trading banks, fund managers, hedge funds, commodity trading advisers, brokers and proprietary traders, market data vendors and retail investors.

By providing its systems, processes and services reliably and fairly, ASX generates confidence in the markets that depend on its infrastructure. This is integral to ASX's long-term commercial success.
